

AcroVista Background Music Service

Live Background Music Service for CyberData Speakers and Devices

Background Music

Stream live music from a MP3 player, iPod, or radio or music from the PC.

Benefits:

- Stream live music from an external audio source (MP3 player, iPod, or radio) to CyberData speakers and multicast-capable phones
- Stream live music from a PC to CyberData speakers and multicast-capable phones with sound card support
- Runs in the background as a Windows service and can run without a user logged into the PC
- Uses minimal system resources and can run on a dedicated netbook or share PC/ server
